Biopulse Pro TCM package 750 EUR

With these features, Biopulse Pro can be used as a stand-alone device working independently from the software and computer.

1) Automatic searching over of reflexology areas/correspondence zones on palms, spine, etc. for imbalanced areas and treatment with colour generated automatically when an imbalanced area is detected. This feature also allows you to scan the zones revealing the most optimal zones for influencing by therapeutic measures you practice.

2) Biopulse Pro is a colour pen being able to generate 8 colors. The LED is built in the device.

In addition to the features included as a stand-alone device, we added 1 desktop software TCM Pro v.1.0:

The software TCM Pro v.1.0 allows to conduct Ryodoraku measurements and also perform colour and frequency therapies as these modules are inbuilt in the software as additional features.

Supplies of Biopulse Pro TCM package:

Device itself as an active/passive probe with an inbuilt nozzle for testing about 5 mm diameter, passive electrode, 2 interchangeable tips, a built LED in the nozzle for colour therapy, USB cable, electrodes for frequency therapy.
Measurement results are sent via Bluetooth.
Li-ion rechargeable battery lasting several years.

LED: can be managed by the main button on the device shifting from one colour to another in a 8 colour pen mode.

2 interchangeable tips: one for colour generating, 1-2 mm diameter, usually working on the auricular or hand points of Su Jok acupuncture.

The second tip, a spring-like with a limiter of the pressure to observe the same loading on the points, usually applied in the EAV method but can be used for Su Jok or auricular points testing), passive electrode and USB cable for connecting to the device.
